

Use of Multi-Function Tool

1. Wire-cutters function

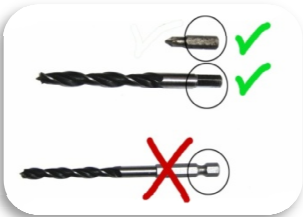

Insert the tool axis in the knife hook, blade upside. Place the steel wire against the blade, press with one hand and cut the wire.

Steel wire section up to 2,5mm.

2. Tool holder Function

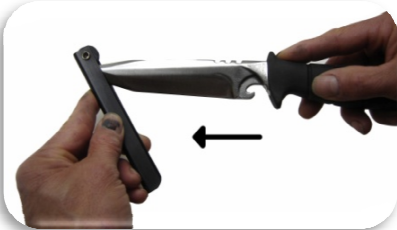

Do not use without the blade protection

Insert a screw-driver blade or a gimlet in the hexagonal hole placed in the opposite side of the tool.

You MUST PROTECT THE BLADE with the the blade protection supplied with the tool.

1. Insert the point of the blade into the protection

2. Push the blade into the protection

3. Maintain the blade and the protection together with the rubber band

4. Type slightly on the pommel to correctly maintain the edge

5. Insert the axis of the wire-cutters into the hook and use as an auger

1. Use as a Wood saw or Hacksaw (Jigsaw blade)

Insert the blade in the hole of the tool and maintain the blade with the screw.
